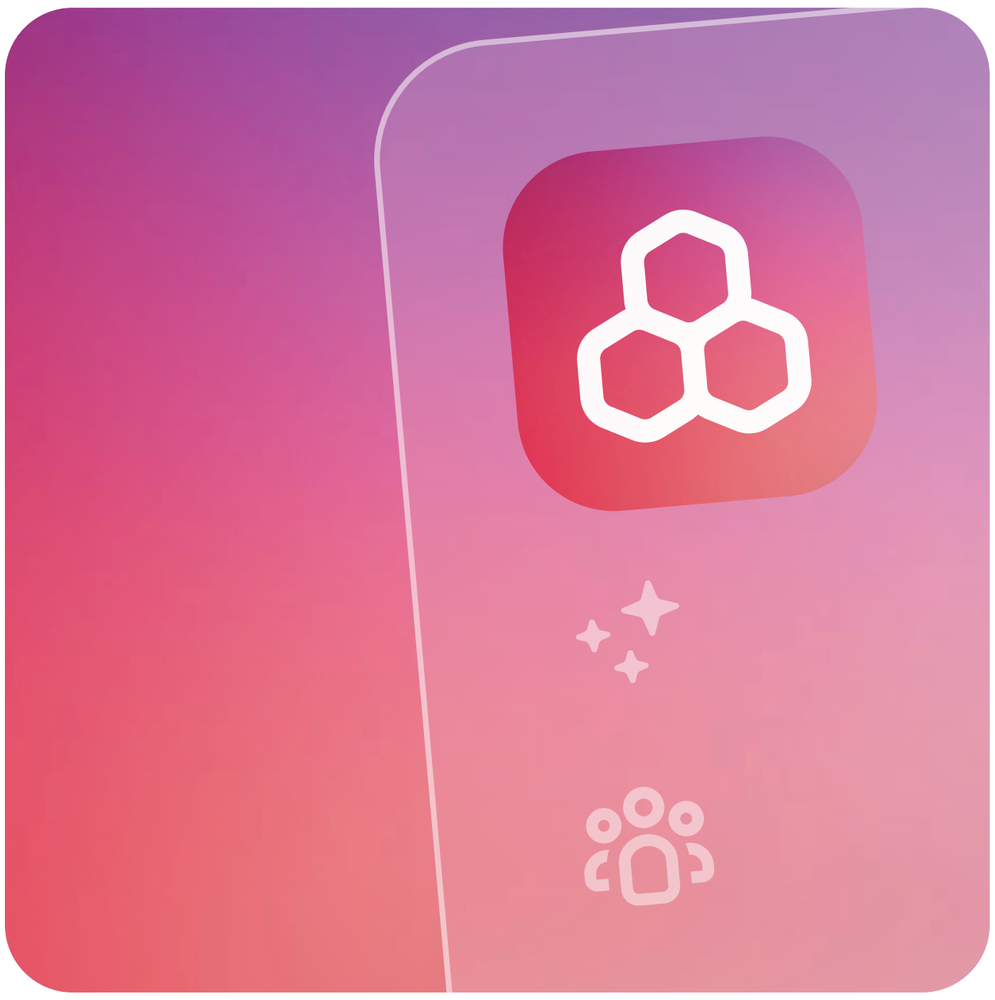
DataGalaxy

Portfolio

Drive alignment and value through a governed portfolio

DataGalaxy Portfolio is an operating model designed to govern, prioritize, and scale AI initiatives with clarity and control. It aligns strategy, value, risk, and execution in one shared framework, helping organizations focus on the right use cases, measure impact, and move from isolated experiments to scalable, business-driven AI.



The data & AI challenges we solve

- Use case management & priorization
- Data & AI product management
- AI Governance
- Value management

Build, align, and scale data and AI initiatives

An operating layer for StratOps

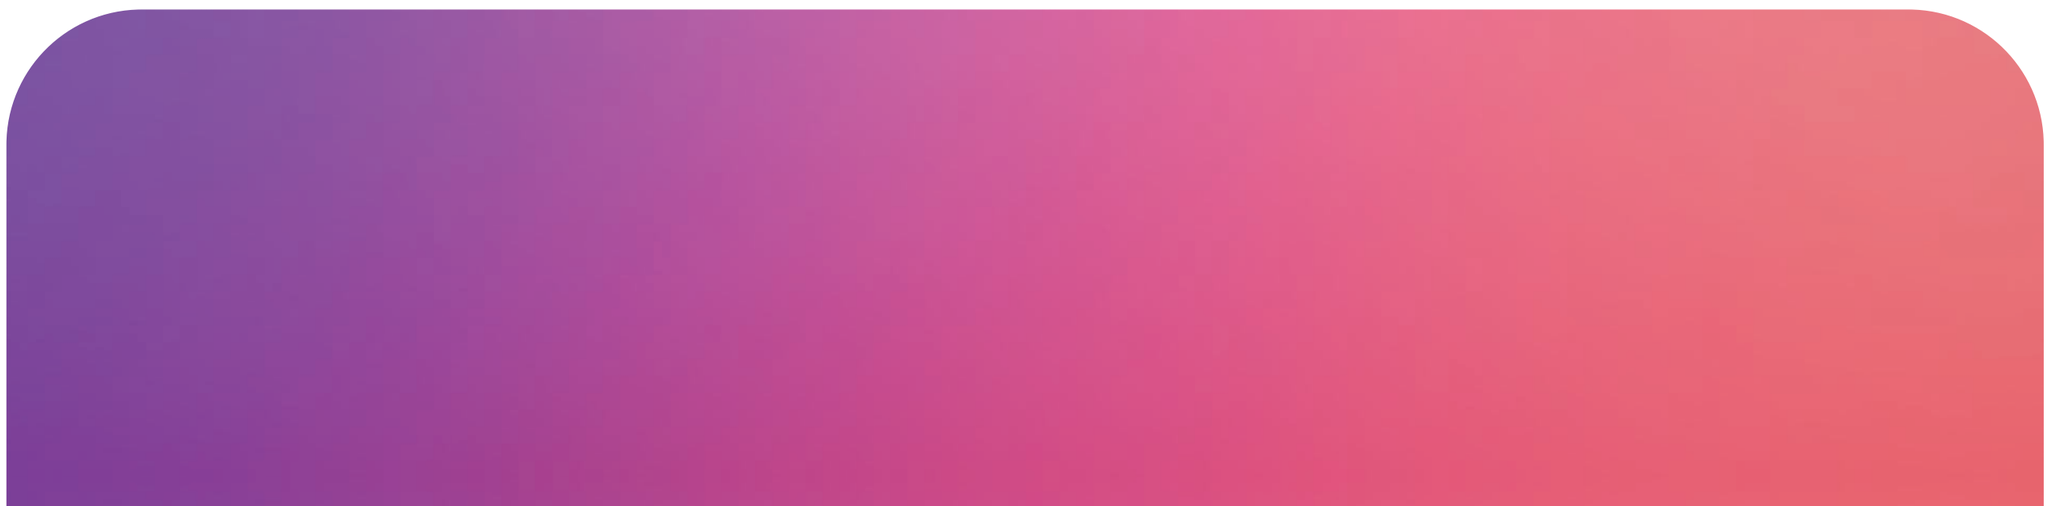
Align business and technical teams with a structured operating model, turning fragmented initiatives into a scalable digital and AI portfolio.

Connecting strategy to value

Connect initiatives, data, and AI products to business objectives, feasibility, and KPIs, linking strategy to delivery and outcomes.

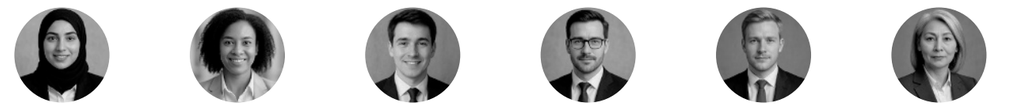
Traceability & accountability

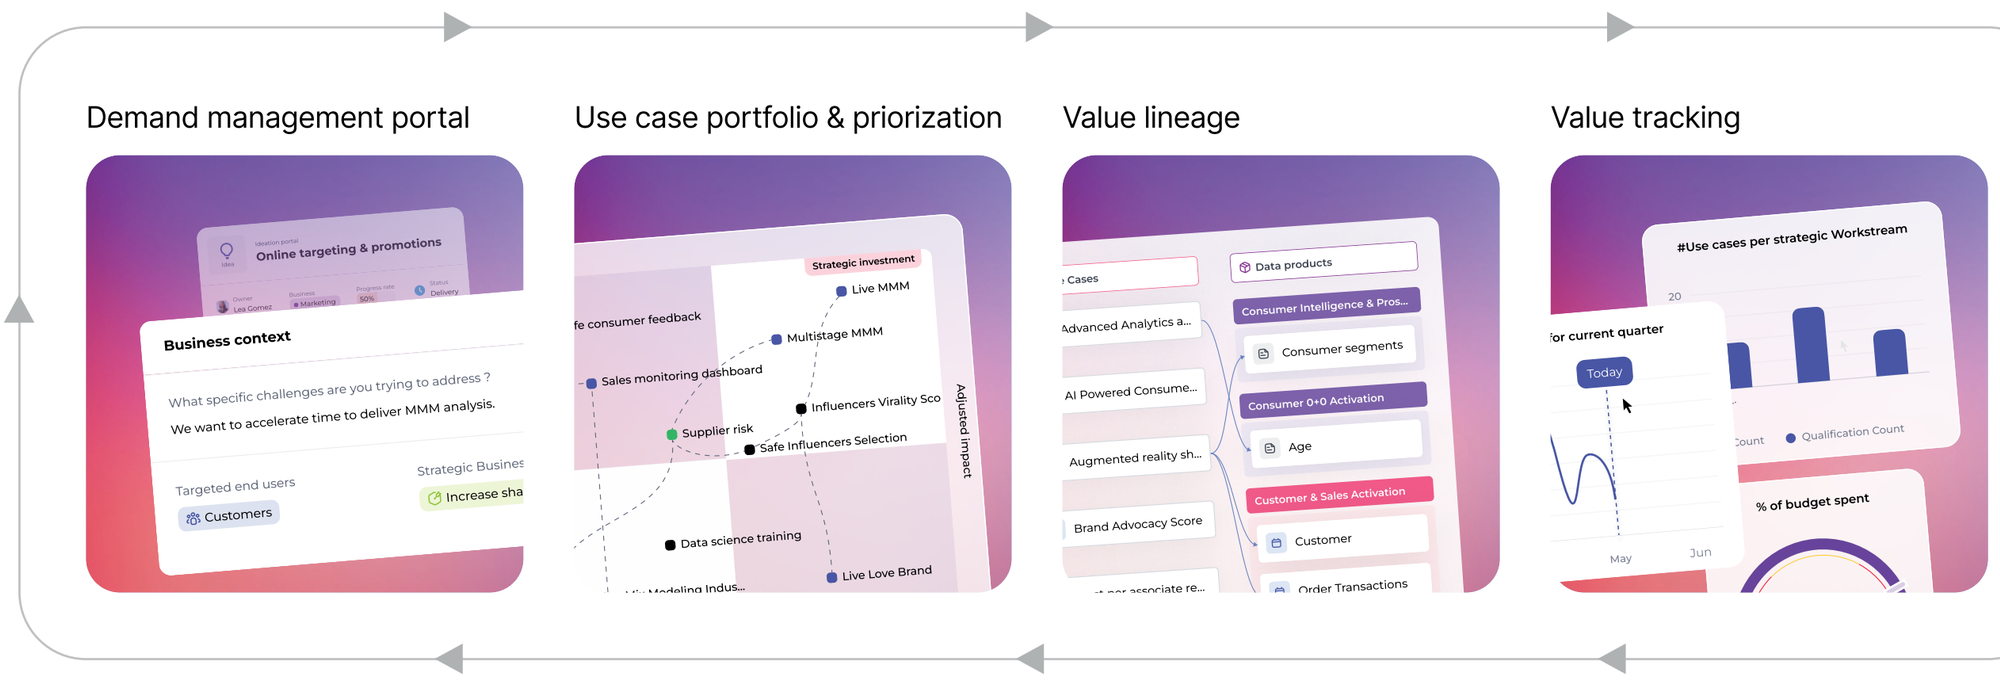
Enable metrics, accountability, and end-to-end traceability, giving leaders the visibility to steer transformation.



Manage the full lifecycle of your data and AI initiatives

One portfolio, driving connection





Roche customer story: from fragmented data investments to value-driven execution

Facing fragmented investments and high spend with limited benefit, Roche shifted from traditional data management to running Data and AI as a global value portfolio.

DataGalaxy Portfolio gave Roche:

- End-to-end visibility across data products, use cases, and strategic objectives
- Stronger alignment between business and IT priorities
- Value tracking to guide investments and decisions

The impact: a single source of truth for DIA Commercial data, clearer traceability from strategy to execution, and faster, value-based decision-making.

100%
increase in visibility of the Data & AI portfolio

300+
use cases, reports and data products in a single portfolio

3+
value streams standardized, driving cross-team collaboration

Metadata to the agents. Value to the people.

We transform data and AI governance from a compliance exercise into a catalyst for driving business value.
