From everyday incidents to major crises: missing information, incorrect contact details, an inaccessible application or an unavailable primary information system.

A few questions to assess an organisation's ability to maintain business continuity

01 Access to information

If the primary information system is unavailable, do the people responsible for business continuity know where to quickly find the essential information they need to keep operating?

☐ Yes ☐ Partly ☐ No

02 Reliable information

In that situation, are procedures, instructions, contacts and deputies, schedules and other essential information available in a reliable, approved and usable form?

☐ Yes ☐ Partly ☐ No

03 Independent resources

Can the people responsible for business continuity access essential information independently of their usual IT tools or a key individual?

☐ Yes ☐ Partly ☐ No

04 Sharing and coordination

Do the people responsible for business continuity have the tools to access, update and share essential information and coordinate their actions, including during disruption?

☐ Yes ☐ Partly ☐ No

05 Testing in real conditions

Have the planned arrangements been tested with the people, information and resources that would actually be available if the primary information system were inaccessible?

☐ Yes ☐ Partly ☐ No

A ready-to-use capability to keep operating

Two local devices, one primary and one secondary, preconfigured and deployed on site in advance.

Prepared in advance, ready whenever needed

01 Access essential information

Procedures, quick-reference guides, directories and essential documents in their latest version approved by the organisation.

02 Share information

People responsible for continuity access, update and share essential documents locally.

03 Coordinate locally

Messaging, video conferencing and a whiteboard remain available over the local network.

04 Remain autonomous

The platform runs locally, without relying on the Internet or a connection to the primary information system.

Archify.fr supports the organisation’s continuity plans. Deployed directly or with a business software vendor, it gives people responsible for continuity local access to essential information and coordination tools.

The consequences of outages extend far beyond IT

Operational, financial and human impacts make it essential to prepare for the continuity of critical operations.

$600bn

Estimated total annual cost of downtime for Global 2000 companies

+50 %

Estimated increase in this total cost between 2024 and 2026

43 %

Share of outages attributed to networks or the IT environment

Continuity extends beyond restoring IT tools

Archify.fr maintains local access to essential information and coordination tools for people responsible for continuity, even without a connection to the primary information system.

A capability supporting the organisation's plans

The arrangements below serve different purposes.

Business continuity

PCA: business continuity plan
PRA: business recovery plan
PCRA: business continuity and recovery plan
PCI: IT continuity plan

Local authorities

PCS: municipal emergency response plan
PICS: intermunicipal emergency response plan

Health and social care

Plan blanc: hospital response to exceptional health emergencies
Plan bleu: emergency management in social care facilities

High-risk industry

POI: internal emergency plan
Organising the response to an incident at a high-risk industrial site

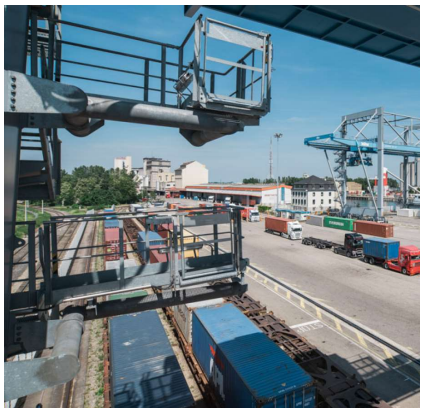

Archify.fr supports these arrangements while preserving their respective objectives, responsibilities and obligations.

Why add a local continuity capability?

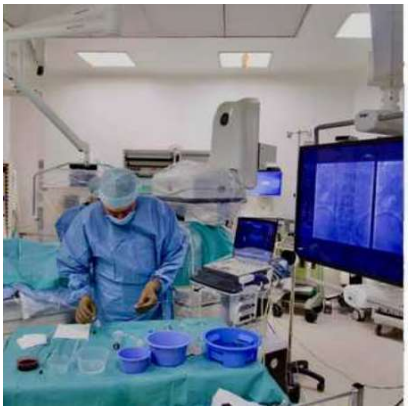

From everyday difficulties to major disruption, organisations need to keep operating. Archify.fr provides local access to essential information, even without a connection to the primary information system.

01	**Support continuity of essential operations** **Access to essential information and local coordination tools for authorised teams.**
02	**Limit the impact of outages** **Less disruption and a stronger ability to maintain essential operations.**
03	**Preserve trust and reputation** **Preparing for continuity helps reassure service users, customers and partners.**
